

We claim:

1. A door hook to be extended over a door top to both sides of a door, the door hook comprising a U-shaped bracket having:
  - a top member,
  - a front side which is attached to one edge of the top member, and
  - a back side which is attached to an other edge of the top member opposite the one edge, wherein the front side and back side are separated by a first distance;
  - a first hook member attached to the front side; and
  - a spacer portion, the spacer portion being detachable from the U-shaped bracket and configured for reattachment to the back side such that the back side with the spacer portion reattached thereto and the front side are separated by a second distance different from the first distance.
2. The door hook of claim 1 wherein the second distance is less than the first distance.
3. The door hook of claim 1 also comprising double sided tape attached to at least one of the back side and spacer portion.
4. The door hook of claim 1 wherein at least one of the front side and the back side is attached to the top member at an acute angle relative to the top member.
5. The door hook of claim 1 wherein the U-shaped bracket is a molded body and the spacer position of the U-shaped bracket is molded adjacent the back side.

6. The door hook of claim 1 further comprising at least one tab or finger attached to the spacer portion, the at least one tab configured to engage at least part of the back side and the top member when the spacer portion is reattached.

7. The door hook of claim 1 wherein the U-shaped bracket is made of one of styrene, polycarbonate, polypropylene and a metal.

8. The door hook of claim 1 wherein the top member is approximately 0.050 to 0.080 inches thick.

9. The door hook of claim 1 also comprising a hook attached to the spacer portion.

10. The door hook of claim 1 also comprising at least one of a locking member and an adhesive on one of the back side and the spacer portion which locking member or adhesive is positioned to retain the spacer portion on the back side after that spacer portion has been reattached to the back side.

11. The door hook of claim 1 further comprising a second hook member attached to the back side.

12. The door hook of claim 1 wherein the spacer portion is connected to one of the top member, the front side and the back side by a frangible joint.

13. The door hook of claim 1 wherein the back portion and the spacer portion are plastic molded in a common plane and connected by a frangible joint.

14. The door hook of claim 1 wherein the back side has a hole and a spacer portion further comprises a threaded portion which is positioned to fit into the hole and retain the spacer portion on the back side after that spacer portion has been reattached to the back side.

15. A door hook to be extended over a door top to both sides of a door, the door hook comprising a U-shaped bracket having:

a top member,

a front side which is attached to one edge of the top member, and

a back side which is attached to the other edge of the top member opposite the one edge;

a first hook member attached to the front side; and

a spacer portion, the spacer portion being adjacent the back side and opposite the front side, being detachable from the U-shaped bracket and being positioned and configured such that the spacer portion and the front side are separated by a first distance and, after the spacer portion is detached from the back side, the front side and back side are separated by a second distance greater than the first distance;

wherein the top member, the front side, the back side, the spacer portion and the first hook member form an integrally molded plastic body.

16. The door hook of 15 wherein the spacer portion is connected to at least one of the back side and the top member by a frangible joint.

17. The door hook of claim 15 wherein the U-shaped bracket is made of one of styrene, polycarbonate, polypropylene and metal.

18. The door hook of claim 15 wherein the spacer portion is configured for reattachment to at least one of the top member, the front side and the back side.
